

# **Availability!**

## **Geographic Availability**

**EnVision® is now available for select counties nationwide for use of placing seed. EnVision® will be limited to counties that have both GPS oriented soil maps and NRCS soil tabular data. This will include approximately 1,800 Counties out of a possible 3,140 total counties in all of the US that will have either NRCS SSurgo or SSurgo2 data available in 2005. Also included will be counties that have either SSIS or NASIS digitized soil maps and available NRCS “Soil Data Mart” soil tabular data. As the NRCS releases new SSurgo, SSurgo2, or soil tabular data for counties that have GPS oriented soil maps, they will be added to the data base. To insure availability, local agronomists and seed dealers must pre-order counties needed. Some counties will not be completed with EnVision® for obvious terrain reasons or lack of cropping in certain parts of the US. Right now we are only placing Corn and Soybeans, with the expectations to expand to other crops as we go along. Call us if you have a specific crop you want placed and we will see what we can get done for you!**
